

### Installing a new component in WBTEExpress

If you want to add a new component to WBTEExpress, follow the install instruction:

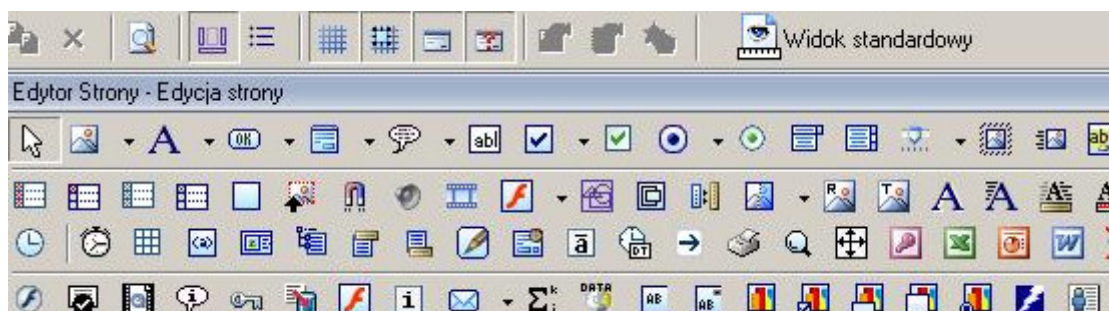

#### Step 1. Copy component file to WBTEExpress program folder

New component (folder with files) copy to folder *components\_user*, (default path: *C:/Program Files/4system/Wbtexpress/components\_user/*)

Note! In case, if folder is a packed file (filename extension: zip, rar, jar), it should unpack before copy and also before copy component to the folder of programme, close all active windows of WBTEExpress.

#### Step 2. Checking of install component correctness

Additional components are visible only in advanced view (pic. 1).

Pic. 1 Advanced view

Icon of installed component should be on components bar (pic. 2).

Pic.2 (exemplary component)

#### Step 3. In case of invisible icon on components bar, follow the instruction:

- Check - is advanced view on (pic. 1)?
- Check - is component copied to the correct folder (pic. 1)?
- Check - were the errors after running WBTEExpress application?
